

DWA_04.3 Knowledge Check_DWA4

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

23.1 Avoid single letter names. Be descriptive with your naming.

- This is so that your code can be more self explaining and the reader would only want to read your documentation for further explanation.

19.13 Avoid having lines of code that are longer than 100 characters(including whitespace)

- This ensures a good level of consistency in the style and also ensures readability and maintainability

18.1 Use `'/** ...*/'` for multiline comments

- This presents the comment in well formatted way rather than using a single line comment `“//”` to comment a paragraph.

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

8.1 When you must use an anonymous function (as when passing an inline callback), use arrow function notation.

Confusion : why is it only moved to its own named function expression when it is fairly complicated, why not start with that

12.3 Use exponentiation operator when calculating exponentiations.

Confusion : The use of `Math.pow (2, 10)` feels more readable and understandable

13.2 Use one `“const”` or `“let”` declaration per variable or assignment.

Confusion: Is it always use a const to declare?
